What is Scientific Knowledge?

An Introduction to Contemporary Epistemology of Science

Edited by **Kevin McCain**, University of Alabama at Birmingham, USA and **Kostas Kampourakis**, University of Geneva, Switzerland

What Is Scientific Knowledge? is a much-needed collection of introductory-level chapters on the epistemology of science. Renowned historians, philosophers, science educators, and cognitive scientists have authored 19 original contributions specifically for this volume. The chapters, accessible for students in both philosophy and the sciences, serve as helpful introductions to the primary debates surrounding scientific knowledge. First-year undergraduates can readily understand the variety of discussions in the volume, and yet advanced students and scholars will encounter chapters rich enough to engage their many interests. The variety and coverage in this volume make it the perfect choice for the primary text in courses on scientific knowledge. It can also be used as a supplemental book in classes in epistemology, philosophy of science, and other related areas.

Key features:

* an accessible and comprehensive introduction to the epistemology of science for a wide variety of students (both undergraduate- and graduate-level) and researchers

* written by an international team of senior researchers and the most promising junior scholars

* addresses several questions that students and lay people interested in science may already have, including questions about how scientific knowledge is gained, its nature, and the challenges it faces.

Part I: How is scientific knowledge generated?

1. How many scientists does it take to have knowledge?
Jeroen de Ridder

2. What attitude should scientists have? Good academic practice as a precondition for the production of knowledge
Thomas A.C. Reydon

3. How do medical researchers make causal inferences?
Olaf Dammann, Ted Poston, and Paul Thagard

4. How do explanations lead to scientific knowledge?
Kevin McCain

5. What is scientific understanding and how can it be achieved
Henk W. de Regt and Christoph Baumberger

Part II: What is the nature of scientific knowledge?

6. What are scientific concepts?
Theodore Arabatzis

7. How can we tell science from pseudoscience?
Stephen Law

8. How do we know that 2+2=4?
Carrie S.I. Jenkins

9. Is scientific knowledge special? Plus ça change, plus c'est la même chose
Richard Fumerton

10. Can scientific knowledge by measured by numbers?
Hanne Andersen

Part III: Does bias affect our access to scientific knowledge?

11. Why do logically incompatible beliefs seem psychologically compatible? Science, pseudoscience, religion, and superstition
Andrew Shtulman and Andrew Young

12. Do our intuitions mislead us? The role of human bias in scientific inquiry
Susan A. Gelman and Kristan A. Marchak

13. Can scientific knowledge sift the wheat from the tares? A brief history of bias (and fears about bias) in science **Erik L. Peterson**

14. What grounds do we have for the validity of scientific findings? The new worries about science **Janet A. Kourany**

15. Is science really value free and objective? From objectivity to scientific integrity **Matthew J. Brown**

Part IV: Is scientific knowledge limited?

16. Should we trust what our scientific theories say?
Dana Tulodziecki and Martin Curd

17. What are the limits of scientific explanation?
Sara Gottlieb and Tania Lombrozo

18. Should we accept scientism? The argument from self-referential *incoherence*
Rik Peels

19. *How* are the uncertainties in scientific knowledge represented in the public sphere? The genetics of intelligence as a case study
Kostas Kampourakis
